James Whalen	Non-Agenda Public Comment	I plan to speak via my computer	
Matthew Vasilakis	Item 2	I plan to submit a comment but do not wish to speak	Dear Chair and Board members, on behalf of Climate Action Campaign, we are disappointed to see that SDG&E has decided against moving forward with SDCP's response to their renewable energy solicitation. SDG&E's lack of cooperation with the community is deeply concerning, and follows a pattern that should keep this body vigilant of their actions. We hope SDG&E will reverse course and support SDCP, and stop working against public power. Thank you.
Lauren Randall	Item 4	I plan to submit a comment but do not wish to speak	<p>Sunrun is excited that SDCP is considering a feed-in tariff and looks forward to working with PEA and staff on its possible development.</p> <p>We're hopeful that SDCP adopts a program that is robust and advances equity and access to clean energy. From having worked with other load-serving entities on successful feed-in tariff programmatic design for both solar and storage, we support feed-in tariffs that have fixed, pre-established pricing blocks. This enables a diverse suite of both large and local, distributed projects. Moreover, feed-in tariffs that include a distinct equity carve-out for projects that offer greater community benefits, like solar paired storage on multifamily affordable housing and 501c3 nonprofits, are important for advancing clean energy access. Thanks for your work!</p>
Jason Anderson	Item 5	I plan to submit a comment but do not wish to speak	On behalf of Cleantech San Diego and our members, I would like to express support for SDCP's 2020 Integrated Resource Plan. Not only will this plan move you towards your renewable energy goals, but it also will benefit our local cleantech and renewable energy economy. By creating an increased demand for renewable energy generation, you create market certainty which will result in more private sector investment and more employment opportunities for all.
Matthew Vasilakis	Item 5	I plan to submit a comment but do not wish to speak	Dear Chair and Board members. On behalf of Climate Action Campaign, we appreciate the board moving forward with an Integrated Resource Plan that does not include dangerous nuclear energy, while also noting that SDCP will still need to develop a long term roadmap to 100% renewable energy by 2030 and 2035 for member cities to meet their individual Climate Action Plan goals. It is imperative for cities to have this roadmap as soon as possible to create the decentralized renewable and resilient energy system we need. Large hydro, while carbon free, is not a renewable energy source, and must be phased out accordingly. We look forward to partnering with you on this important effort. Thank you.
